

SRI FIRE TEC

Is compact, yet very flexible, automatic and autonomous fire detection and extinguishing systems.

The system works by automatically detecting and suppressing fire at its infant stage to safeguard the assets.

The effectiveness of SRI fire Tec System comes from the revolutionary polymer tubing that will rupture when exposed to flame.

This specialized SRI fire Tec detection tube of excellent vibration resistance, flexibility, durability and precise temperature sensitivity which allow it to rapidly react when the heat from fire is present.

SRI FIRE TEC

Detection tube is routed throughout the protected area and it acts as multi sensor and multi extinguishing jet triggering the nozzle where the heat is detected. when fire starts, the SRI fire Tec detection tube will burst at its hottest spot (100 °C) as a matter of fact the suppression agent is discharged through the nozzle like opening, suppressing fire in second before any futher damages is being done.

SRI FIRE TEC

System does not require any electricity or external power supply. It continues to provide the vital protection even in the event of power failure.

FIRECHEM HEAT SENSING TUBE DATASHEET

DWG NO: FCFSD/HST/LT/004

REV :00

FIRECHEM Heat Sensing Tube is the basic component used for detection as well as delivery of the extinguishing agent in the Automatic Fire Detection & Suppression Systems. When a pressurized polymer tube is exposed to a heated environment, the gas/air inside the tube tries to expand due to the increase in temperature and slowly the polymer also starts softening beyond a particular temperature. Once the environment temperatures are high enough for the polymer tube to actually melt, the tube ruptures at the hottest point creating a nozzle like opening in the tube (due to internal pressure) releasing the internal fire suppression agents.
